TEST REPORT

Applicant	:	Mid Ocean Brands B.V.
Address	:	7/F., King Tower, 111King Lam Street, Cheung ShaWan, Kowoon, HongKong.

Report on the submitted samples said to be:

Sample Name(s)	WIRELESS SPEAKER	
Trade Mark	N/A	
Tested Model No.	CX1449	
Sample Received Date	June 07, 2024	
Testing Period	June 07, 2024 ~ June 15, 2024	
Date of Report	June 17, 2024	
Testing Location		ndustrial Zone, Heshuikou Community, trict, Shenzhen, Guangdong, China
Results	Please refer to next page(s).	

TEST REQUEST		CONCLUSION
As specified by client, to determine Lead(Pb), Content in the submitted sample according to 2023/1542 and its Annex I.		PASS
在 LCS Testing Lab	立讯检测展份 LCS Testing Lab	互立讯检测限份 LCS Testing Lab

Signed for and on behalf of LCS

Terry.Luo

Tested part(s):

(1) Battery

Test method: With reference to IEC 62321-5:2013 & IEC 62321-4:2013+AMD1:2017 CSV, by acid digestion and analysis was performed by inductively coupled plasma optical emission spectrometer (ICP-OES).

Tested result(s):

Test Item(s)	MDL (%)	Test Result(s) (%) (1)	Limit (%)
Lead(Pb) Content	0.0005	0.0018	0.01#2
Cadmium(Cd) Content	0.0005	N.D.	0.002#1
Mercury(Hg) Content	0.0005	N.D.	0.0005

Remark:

According to Regulation (EU) 2023/1542:

- *1 = This Regulation does not apply to batteries that are incorporated into or that are specifically designed to be incorporated into:
 - (a) equipment connected with the protection of Member States' essential security interests, arms, munitions and war material, with the exclusion of products that are not intended for specifically military purposes;

(b) equipment designed to be sent into space.

%2 = From 18 August 2025, all batteries shall be marked with the symbol for separate collection of batteries ('separate collection symbol')

Symbol for separate collection of batteries

The separate collection symbol shall cover at least 3 % of the area of the largest side of the battery up to a maximum size of 5×5 cm.

In the case of cylindrical battery cells, the separate collection symbol shall cover at least 1,5 % of the surface area of the battery and shall have a maximum size of 5×5 cm.

Where the size of the battery is such that the separate collection symbol would be smaller than $0,47 \times 0,47$ cm, the battery does not need to be marked with that symbol. Instead, a separate collection symbol measuring at least 1×1 cm shall be printed on the packaging.

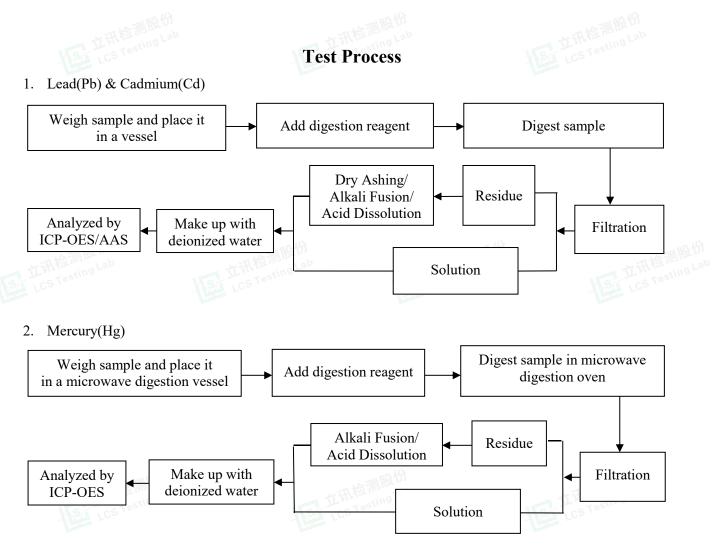

3 = All batteries containing more than 0,002 % cadmium or more than 0,004 % lead, shall be marked with the chemical symbol for the metal concerned: Cd or Pb. And the relevant chemical symbol indicating the heavy metal content shall be printed beneath the separate collection symbol and shall cover an area of at least one-quarter the size of that symbol.

Note:

- MDL = Method Detection Limit
- N.D. = Not Detected (<MDL)
- "#1" signifies that this limit value applies only to portable batteries, whether or not incorporated into appliances, light means of transport or other vehicles.
- "#2" signifies that, beginning on August 18, 2024, this threshold value will be enforced for portable batteries, except for zinc-air button cells which will come into effect on August 18, 2028, regardless of whether they are integrated into appliances.

The artwork below may be only a draft. The use of certification marks on a product must be authorized by the respective NCBs that own these marks.

Polymer Li-ion Battery
Model: 602030 (1ICP6/20/30)

Rated: 3.7V 300mAh 1.11Wh

Red wire: + Black wire: -

YYYY	MM DD	1

Information for safety mentioned on equipment's package

Potential for fire or burning. Do not disassemble, puncture, crush, heat or burn. Use only with specified charger.

Keep small cells and batteries which are considered swallowable out of the reach of children.

Swallowing may lead to burns, perforation of soft tissue, and death. Severe burns can occur within 2h of ingestion.

In case of ingestion of a cell or battery, seek medical assistance promptly.

Test item particulars:	
Classification of installation and use	To be defined in final product
Supply connection:	Lead wire
Recommend charging method declared by the manufacturer:	Charging the battery with 60mA constant current until 4.2V, then constant voltage until charge current reduces to 3mA at ambient 20°C±5°C.
Discharge current (0,2 It A):	60mA
Specified final voltage:	2.4V
Upper limit charging voltage per cell	4.2V
Maximum charging current:	150mA
Charging temperature upper limit:	45°C
Charging temperature lower limit:	0°C
Polymer cell electrolyte type	☐gel polymer ☐solid polymer ⊠N/A
Possible test case verdicts:	N/A P (Pass) F (Fail)
- test case does not apply to the test object::	N/A
- test object does meet the requirement:	P (Pass)
- test object does not meet the requirement:	F (Fail)
Testing	
Date of receipt of test item:	2024-03-04

Clause	Requirement + Test	Result - Remark	Verdic
4	PARAMETER MEASUREMENT TOLERANCES		Р
	Parameter measurement tolerances		Р
5	GENERAL SAFETY CONSIDERATIONS		Р
5.1	General		Р
	Cells and batteries so designed and constructed that they are safe under conditions of both intended use and reasonably foreseeable misuse		Ρ
5.2	Insulation and wiring		Р
	The insulation resistance between the positive terminal and externally exposed metal surfaces of the battery (excluding electrical contact surfaces) is not less than 5 M Ω	No metal surface exists.	N/A
	Insulation resistance (MΩ)	170	_
	Internal wiring and insulation are sufficient to withstand maximum anticipated current, voltage and temperature requirements	6	Ρ
	Orientation of wiring maintains adequate clearances and creepage distances between conductors		Р
	Mechanical integrity of internal connections accommodates reasonably foreseeable misuse	Co	Ρ
5.3	Venting		Р
	Battery cases and cells incorporate a pressure relief mechanism or are constructed so that they relieve excessive internal pressure at a value and rate that will preclude rupture, explosion and self-ignition	Venting mechanism exists on narrow side of the pouch cell.	Ρ
	Encapsulation used to support cells within an outer casing does not cause the battery to overheat during normal operation nor inhibit pressure relief		N/A
5.4	Temperature, voltage and current management		Р
	Batteries are designed such that abnormal temperature rise conditions are prevented	Overcharge, overdischarge, over current and short-circuit proof circuit used in this battery. See tests of clause 7.	Ρ
	Batteries are designed to be within temperature, voltage and current limits specified by the cell manufacturer	See above.	Р
	Batteries are provided with specifications and charging instructions for equipment manufacturers so that specified chargers are designed to maintain charging within the temperature, voltage and current limits specified	The charging limits specified in the manufacturer's specification.	Ρ

	EN 62133-2			
Clause	Requirement + Test	Result - Remark	Verdict	
	For the battery consisting of a single cell or a single cellblock, it is recommended that the charging voltage of the cell does not exceed the upper limit of the charging voltage specified in Table 2	Single cell battery, Max. Charging voltage of cell: 4.2V, not exceed 4.2V specified in Clause 7.1.2, Table 2.	Ρ	
	For the battery consisting of series-connected plural single cells or series-connected plural cellblocks, it is recommended that the voltages of any one of the single cells or single cellblocks does not exceed the upper limit of the charging voltage, specified in Table 2, by monitoring the voltage of every single cell or the single cellblocks		N/A	
	For the battery consisting of series-connected plural single cells or series-connected plural cellblocks, it is recommended that charging is stopped when the upper limit of the charging voltage is exceeded for any one of the single cells or single cellblocks by measuring the voltage of every single cell or the single cellblocks	chnor	N/A	
	For batteries consisting of series-connected cells or cell blocks, nominal charge voltage are not counted as an overcharge protection	9	N/A	
	For batteries consisting of series-connected cells or cell blocks, cells have closely matched capacities, be of the same design, be of the same chemistry and be from the same manufacturer	Co	N/A	
	It is recommended that the cells and cell blocks are not discharged beyond the cell manufacturer's specified final voltage	Final voltage of cell: 2.4V, not exceed the final voltage specified by cell manufacturer.	Р	
	For batteries consisting of series-connected cells or cell blocks, cell balancing circuitry are incorporated into the battery management system	R .2	N/A	
5.6.3	Mechanical protection for cells and components of batteries		Р	
	Mechanical protection for cells, cell connections and control circuits within the battery are provided to prevent damage as a result of intended use and reasonably foreseeable misuse	Mechanical protection for cell connections and control circuits provided.	Ρ	
	The mechanical protection can be provided by the battery case or it can be provided by the end product enclosure for those batteries intended for building into an end product	Build-in batteries, mechanical protection for battery should be provided by end product.	N/A	
	The battery case and compartments housing cells are designed to accommodate cell dimensional tolerances during charging and discharging as recommended by the cell manufacturer	To be evaluated in final system.	N/A

	Results: no fire, no explosion, no rupture, no leakage or venting:	(See appended table 7.3.8.1)	Р
7.3.8.2	Mechanical shock	Tested complied.	Р
	Results: no leakage, no venting, no rupture, no explosion and no fire:	(See appended table 7.3.8.2)	Р
7.3.9	Design evaluation – Forced internal short-circuit (cells)	Tested complied.	Р
	The cells complied with national requirement for:	France, Japan, Republic of Korea, Switzerland	-
	The pressing was stopped upon:		Р
	- A voltage drop of 50 mV has been detected; or		N/A
	- The pressing force of 800 N (cylindrical cells) or 400 N (prismatic cells) has been reached	400N for prismatic cells.	Р
	Results: no fire:	(See appended table 7.3.9)	Р
