The product fulfils the requirements of EN IEC 62368-1: 2020+A11:2020.

## Copy of marking plate: Round wireless charger Model: MO2175 MID OCEAN BRANDS B.V Unit 201 2/F., Laford Centre,838 Lai Chi Kok Road,Cheung Sha Wan,Kowloon, Hongkong Importer:xxx Address:xxx Made In China CEE

## Remark:

1) The CE marking and WEEE symbol (if any) should be at least 5mm and 7mm respectively in height.

2) The markings and instructions are the minimum requirements required by safety standard. For final production samples, the additional markings which do not give rise to misunderstanding may be added.

3) As declared by the applicant, the importer (and manufacturer, if it is different)'s name, registered trade name or mark and the postal address will be marked on the products before being place on the market.

4) Marking on the packaging or in a document accompanying the electrical equipment is only acceptable if it is not possible to place such markings on the product.

|----------|--|-----------------|---------|
| Clause   | Requirement – Test   | Result – Remark | Verdict |
| 3.3.19.4 | sound exposure level, SEL  |                 | N       |
|          | le venitharie recentre of cound over course velative to a  |                 |         |
|          | logarithmic measure of sound exposure relative to a reference value, <i>E</i> <sub>0</sub> , typically the 1 kHz   |                 |         |
|          | threshold of hearing in humans.  |                 |         |
|          |  |                 |         |
|          | Note 1 to entry: SEL is measured as A-weighted levels in dB.   |                 |         |
|          |  |                 |         |
|          | $SEL = 10 \lg \left(\frac{E}{E_0}\right) dB$   |                 |         |
|          | $\frac{3EE - 10 \log \left(\frac{1}{E_0}\right)}{dB}$  |                 |         |
|          |  |                 |         |
|          | Note 2 to entry: See B.4 of EN 50332-3:2017 for additional information.  |                 |         |
| 3.3.19.5 | digital signal level relative to full scale, dBFS  |                 | N       |
|          |  |                 |         |
|          | levels reported in dBFS are always r.m.s. Full scale level,  |                 |         |
|          | 0 dBFS, is the level of a dc-free 997-   |                 |         |
|          | Hz sine wave whose undithered positive peak value is positive digital full scale, leaving the code   |                 |         |
|          | corresponding to negative digital full scale unused  |                 |         |
|          |  |                 |         |
|          | Note 1 to entry: It is invalid to use dBFS for non-r.m.s. levels. Because<br>the definition of full scale is based on a sine wave, the level of signals  |                 |         |
|          | with a crest factor lower than that of a sine wave may exceed 0 dBFS.  |                 |         |
| 2        | In particular, square wave signals may reach +3,01 dBFS.<br>Modification to Clause 10  |                 |         |
|          | Modification to Clause 10  |                 |         |
| 10.6     | Safeguards against acoustic energy sources   |                 | N       |
|          | Replace 10.6 of IEC 62368-1 with the following:  |                 |         |
| 10.6.1.1 | Introduction   |                 | N       |
|          | Safeguard requirements for protection against long-term  |                 |         |
|          | exposure to excessive sound pressure   |                 |         |
|          |  |                 |         |
|          |  |                 |         |

#### Report No.: AGC05443231105ES01 Page 42 of 69

| EN IEC 62368-1 |   |                 |         |
|----------------|---|-----------------|---------|
| Clause         | Requirement – Test  | Result – Remark | Verdict |
|                | Personal music players shall comply with the requirements of either 10.6.2 or 10.6.3.   |                 |         |
|                | NOTE 1 Protection against acoustic energy sources from telecom applications is referenced to ITU-T P.360.   |                 |         |
|                | NOTE 2 It is the intention of the Committee to allow the alternative methods for now, but to only use the dose measurement method as given in 10.6.5 in future. Therefore, manufacturers are encouraged to implement 10.6.5 as soon as possible.  |                 |         |
|                | Listening devices sold separately shall comply with the<br>requirements of 10.6.6.<br>These requirements are valid for music or video mode<br>only.<br>The requirements do not apply to:<br>– professional equipment;   |                 |         |
|                | NOTE 3 Professional equipment is equipment sold through special sales channels. All products sold through normal electronics stores are considered not to be professional equipment.  |                 |         |
|                | <ul> <li>hearing aid equipment and other devices for assistive listening;</li> <li>the following type of analogue personal music players:</li> <li>long distance radio receiver (for example, a multiband radio receiver or world band radio receiver, an AM radio receiver), and</li> <li>cassette player/recorder;</li> </ul>           |                 |         |
|                | NOTE 4 This exemption has been allowed because this technology is falling out of use and it is expected that within a few years it will no longer exist. This exemption will not be extended to other technologies.   |                 |         |
|                | <ul> <li>a player while connected to an external amplifier that<br/>does not allow the user to walk around<br/>while in use.</li> </ul>   |                 |         |
|                | For equipment that is clearly designed or intended primarily for use by children, the limits of the relevant toy standards may apply.   |                 |         |
|                | The relevant requirements are given in EN 71-1:2011, 4.20 and the related tests methods and measurement distances apply.  |                 |         |
| 10.6.1.2       | Non-ionizing radiation from radio frequencies in the range 0 to 300 GHz   |                 | N       |
|                | The amount of non-ionizing radiation is regulated by<br>European Council Recommendation 1999/519/EC of 12<br>July 1999 on the limitation of exposure of the general<br>public to electromagnetic fields (0 Hz to 300 GHz).<br>For intentional radiators, ICNIRP guidelines should be<br>taken into account for Limiting Exposure to Time- |                 |         |

#### Report No.: AGC05443231105ES01 Page 43 of 69

|          | EN IEC 62368-1   |                 |         |
|----------|--|-----------------|---------|
| Clause   | Requirement – Test   | Result – Remark | Verdict |
|          | Varying Electric, Magnetic, and Electromagnetic Fields   |                 |         |
|          | (up to 300 GHz). For hand-held and body mounted  |                 |         |
|          | devices, attention is drawn to EN 50360 and EN 50566.  |                 |         |
| 10.6.2   | Classification of devices without the capacity to estim  | nate sound dose | N       |
| 10.6.2.1 | General  |                 | N       |
|          |  |                 |         |
|          | This standard is transitioning from short-term based (30   |                 |         |
|          | s) requirements to long-term based (40 hour)   |                 |         |
|          | requirements. These clauses remain in effect only for  |                 |         |
|          | devices that do not comply with sound dose estimation  |                 |         |
|          | as stipulated in EN 50332-3.   |                 |         |
|          | For classifying the accustic output <i>L</i> ,massurements   |                 |         |
|          | For classifying the acoustic output $L_{Aeq, \tau}$ , measurements are based on the A-weighted equivalent sound pressure   |                 |         |
|          | level over a 30 s period.  |                 |         |
|          | For music where the average sound pressure (long term  |                 |         |
|          | $L_{Aeq,\tau}$ measured over the duration of the song is lower   |                 |         |
|          | than the average produced by the programme   |                 |         |
|          | simulation noise, measurements may be done over the  |                 |         |
|          | duration of the complete song. In this case, T becomes   |                 |         |
|          | the duration of the song.  |                 |         |
|          | NOTE Classical music, acoustic music and broadcast typically has an  |                 |         |
|          | average sound pressure (long term $L_{Aeq, \tau}$ ) which is much lower than   |                 |         |
|          | the average programme simulation noise. Therefore, if the player is  |                 |         |
|          | capable to analyse the content and compare it with the programme<br>simulation noise, the warning does not need to be given as long as the   |                 |         |
|          | average sound pressure of the song does not exceed the required  |                 |         |
|          | limit.   |                 |         |
|          | For example, if the player is set with the programme simulation noise<br>to 85 dB, but the average music level of the song is only 65 dB, there  |                 |         |
|          | is no need to give a warning or ask an acknowledgement as long as  |                 |         |
|          | the average sound level of the song is not above the basic limit of 85   |                 |         |
| 10.6.2.2 | dB.<br>RS1 limits (to be superseded, see 10.6.3.2)   |                 | N       |
|          |  |                 |         |
|          | RS1 is a class 1 acoustic energy source that does not exceed the following:  |                 |         |
|          | – for equipment provided as a package (player with its   |                 |         |
|          | listening device), and with a proprietary connector  |                 |         |
|          | between the player and its listening device, or where the  |                 |         |
|          | combination of player and listening device, or where the   |                 |         |
|          | other means such as setting or automatic detection, the  |                 |         |
|          | $L_{Aeq}$ , $\tau$ acoustic output shall be $\leq 85$ dB when playing the  |                 |         |
|          | fixed "programme simulation noise" described in EN   |                 |         |
|          | 50332-1.   |                 |         |
|          | – for equipment provided with a standardized connector   |                 |         |
|          | (for example, a 3,5 phone jack) that allows connection to  |                 |         |
|          | a listening device for general use, the unweighted r.m.s.  |                 |         |
|          | output voltage shall be ≤ 27 mV (analogue interface) or -  |                 |         |
|          | 25 dBFS (digital interface) when playing the fixed   |                 |         |
|          | "programme simulation noise" described in EN 50332-1.  |                 |         |
|          | — The RS1 limits will be updated for all devices as per<br>not been signed by authorized approver, or having been altered without authorization, or having been altered without authorization, or having been altered without authorization. |                 |         |

|                |  |                 |         |
|                | An equipment safeguard shall prevent exposure of an  |                 |         |
|                | ordinary person to an RS2 source without intentional   |                 |         |

| EN IEC 62368-1 |   |                 |         |
|----------------|---|-----------------|---------|
| Clause         | Requirement – Test  | Result – Remark | Verdict |
|                | physical action from the <b>ordinary person</b> and shall<br>automatically return to an output level not exceeding<br>what is specified for an RS1 source when the power is<br>switched off.  |                 |         |
|                | The equipment shall provide a means to actively inform<br>the user of the increased sound level when the<br>equipment is operated with an output exceeding RS1.<br>Any means used shall be acknowledged by the user<br>before activating a mode of operation which allows for<br>an output exceeding RS1. The acknowledgement does<br>not need to be repeated more than once every 20 h of<br>cumulative listening time.  |                 |         |
|                | NOTE 2 Examples of means include visual or audible signals. Action from the user is always needed.  |                 |         |
|                | NOTE 3 The 20 h listening time is the accumulative listening time, independent of how often and how long the personal music player has been switched off.   |                 |         |
|                | A <b>skilled person</b> shall not be unintentionally exposed to RS3.  |                 |         |
| 10.6.5         | Requirements for dose-based systems   |                 | N       |
| 10.6.5.1       | General requirements  |                 | N       |
|                | Personal music players shall give the warnings as provided below when tested according to EN 50332-3, using the limits from this clause.  |                 |         |
|                | The manufacturer may offer optional settings to allow<br>the users to modify when and how they wish to receive<br>the notifications and warnings to promote a better user<br>experience without defeating the safeguards. This<br>allows the users to be informed in a method that best<br>meets their physical capabilities and device usage<br>needs. If such optional settings are offered, an<br>administrator (for example, parental restrictions,<br>business/educational administrators, etc.) shall be able<br>to lock any optional settings into a specific configuration. |                 |         |
|                | The personal music player shall be supplied with easy to<br>understand explanation to the user of the dose<br>management system, the risks involved, and how to use<br>the system safely. The user shall be made aware that<br>other sources may significantly contribute to their sound<br>exposure, for example work, transportation, concerts,<br>clubs, cinema, car races, etc.   |                 |         |
| 10.6.5.2       | Dose-based warning and requirements   |                 | N       |
|                | When a dose of 100 % <i>CSD</i> is reached, and at least at every 100 % further increase of <i>CSD</i> , the device shall warn the user and require an acknowledgement. In case   |                 |         |

|          | EN IEC 62368-1  |                 |         |
|----------|---|-----------------|---------|
| Clause   | Requirement – Test  | Result – Remark | Verdict |
|          | the user does not acknowledge, the output level shall automatically decrease to compliance with class RS1.  |                 |         |
|          | The warning shall at least clearly indicate that listening above 100 % <i>CSD</i> leads to the risk of hearing damage or loss.  |                 |         |
| 10.6.5.3 | Exposure-based requirements   |                 | N       |
|          | With only dose-based requirements, cause and effect<br>could be far separated in time, defying the purpose of<br>educating users about safe listening practice. In addition<br>to dose-based requirements, a PMP shall therefore also<br>put a limit to the short-term sound level a user can listen<br>at.   |                 |         |
|          | The exposure-based limiter (EL) shall automatically<br>reduce the sound level not to exceed 100 dB(A) or 150<br>mV integrated over the past 180 s, based on<br>methodology defined in EN 50332-3.<br>The EL settling time (time from starting level reduction to<br>reaching target output) shall be 10 s or faster.  |                 |         |
|          | Test of EL functionality is conducted according to EN 50332-3, using the limits from this clause. For equipment provided as a package (player with its listening device), the level integrated over 180 s shall be 100 dB or lower. For equipment provided with a standardized connector, the unweighted level integrated over 180 s shall be no more than 150 mV for an analogue interface and no more than -10 dBFS for a digital interface.  |                 |         |
|          | NOTE In case the source is known not to be music (or test signal), the EL may be disabled.  |                 |         |
| 10.6.6   | Requirements for listening devices (headphones, earp  | ohones, etc.)   | N       |
| 10.6.6.1 | <b>Corded listening devices with analogue input</b><br>With 94 dB <i>L</i> Aeq acoustic pressure output of the listening device, and with the volume and sound settings in the listening device (for example, built-in volume level control, additional sound features like equalization, etc.) set to the combination of positions that maximize the measured acoustic output, the input voltage of the listening device when playing the fixed "programme simulation noise" as described in EN 50332-1 shall be $\geq$ 75 mV. |                 | N       |
| 10.6.6.2 | mV or 100 dB and 150 mV.<br>Corded listening devices with digital input   |                 | N       |
|          | With any playing device playing the fixed "programme  |                 |         |

|-----------|--|-----------------|---------|
| Clause    | Requirement – Test   | Result – Remark | Verdict |
|           | the following conditions:  |                 |         |
|           | the insulation requirements are satisfied by having a  |                 |         |
|           | capacitor classified Y3 as defined by EN 60384-14,   |                 |         |
|           | which in addition to the Y3 testing, is tested with an   |                 |         |
|           | impulse test of 2,5 kV defined in 5.4.11;  |                 |         |
|           | • the additional testing shall be performed on all the   |                 |         |
|           | test specimens as described in EN 60384-14;  |                 |         |
|           | the impulse test of 2,5 kV is to be performed before the   |                 |         |
|           | endurance test in EN 60384-14, in the sequence of tests  |                 |         |
|           | as described in EN 60384-14.   |                 |         |
| 5.5.2.1   | Norway   |                 | N       |
|           | After the 3rd paragraph the following is added:  |                 |         |
|           |  |                 |         |
|           | Due to the IT power system used, capacitors are required to be rated for the applicable line-to-line voltage |                 |         |
|           | (230 V).   |                 |         |
| 5.5.6     | Finland, Norway and Sweden   |                 | N       |
|           | To the end of the subclause the following is added:  |                 |         |
|           |  |                 |         |
|           | Resistors used as <b>basic safeguard</b> or bridging <b>basic</b>  |                 |         |
|           | insulation in class I pluggable equipment type A shall comply with G.10.1 and the test of G.10.2.            |                 |         |
| 5.6.1     | Denmark  |                 | N       |
|           | Add to the and of the subslaues  |                 |         |
|           | Add to the end of the subclause<br>Due to many existing installations where the socket-                      |                 |         |
|           | outlets can be protected with fuses  |                 |         |
|           | with higher rating than the rating of the socket-outlets   |                 |         |
|           | the protection for pluggable equipment type A shall be an integral part of the                               |                 |         |
|           | equipment.   |                 |         |
|           | Justification:   |                 |         |
|           | In Denmark an existing 13 A socket outlet can be protected by a 20 A fuse.                                   |                 |         |
| 5.6.4.2.1 | Ireland and United Kingdom   |                 | N       |
| 1         |  |                 |         |
|           | After the indent for <b>pluggable equipment type A</b> , the following is added:                             |                 |         |
|           | - the <b>protective current rating</b> is taken to be 13 A, this   |                 |         |
|           | being the largest rating of fuse used in the <b>mains</b> plug.  |                 |         |
| 5.6.4.2.1 | France   |                 | N       |
|           | After the indent for <b>pluggable equipment type A</b> , the   |                 |         |
|           | following is added:  |                 |         |
|           | - in certain cases, the <b>protective current rating</b> of the  |                 |         |
|           | circuit supplied from the mains is taken as 20 A instead of 16 A.  |                 |         |
|           |  | 1               |         |

| Clause  | Requirement – Test  | Result – Remark | Verdict |
| 5.6.5.1 | To the second paragraph the following is added:   |                 | N       |
|         | The range of conductor sizes of flexible cords to be  |                 |         |
|         | accepted by terminals for equipment with a rated current  |                 |         |
|         | over 10 A and up to and including 13 A is:  |                 |         |
|         | 1,25 mm <sup>2</sup> to 1,5 mm <sup>2</sup> in cross-sectional area.  |                 |         |
| 5.6.8   | Norway  |                 | N       |
|         | To the end of the subclause the following is added:   |                 |         |
|         | Equipment connected with an earthed mains plug is   |                 |         |
|         | classified as class I equipment. See the Norway   |                 |         |
|         | marking requirement in 4.1.15. The symbol IEC 60417-  |                 |         |
|         | 6092, as specified in F.3.6.2, is accepted.   |                 |         |
| 5.7.6   | Denmark   |                 | N       |
|         | To the end of the subclause the following is added:   |                 |         |
|         | The installation instruction shall be affixed to the  |                 |         |
|         | equipment if the protective conductor current   |                 |         |
|         | exceeds the limits of 3,5 mA a.c. or 10 mA d.c.   |                 |         |
| 5.7.6.2 | Denmark   |                 | N       |
|         | To the end of the subclause the following is added:   |                 |         |
|         | The warning (marking safeguard) for high touch current  |                 |         |
|         | is required if the touch current or the protective current  |                 |         |
|         | exceed the limits of 3,5 mA .   |                 |         |
| 5.7.7.1 | Norway and Sweden   |                 | N       |
|         | To the end of the subclause the following is added:   |                 |         |
|         | The screen of the television distribution system is   |                 |         |
|         | normally not earthed at the entrance of the building and  |                 |         |
|         | there is normally no equipotential bonding system within  |                 |         |
|         | the building.   |                 |         |
|         | Therefore the protective earthing of the building installation needs to be isolated from the screen of a      |                 |         |
|         | cable distribution system.  |                 |         |
|         |   |                 |         |
|         | It is however accepted to provide the insulation external   |                 |         |
|         | to the equipment by an adapter or an interconnection cable with galvanic isolator, which may be provided by a |                 |         |
|         | retailer, for example.  |                 |         |
|         | The user manual shall then have the following or similar  |                 |         |
|         | information in Norwegian and Swedish language   |                 |         |
|         | respectively, depending on in what country the  |                 |         |
|         | equipment is intended to be used in:  |                 |         |
|         | "Apparatus connected to the protective earthing of the  |                 |         |
|         | building installation through the mains connection or   |                 |         |
|         | through other apparatus with a connection to protective   |                 |         |
|         | earthing –  |                 |         |
|         | and to a television distribution system using coaxial   |                 |         |

### -----END OF REPORT-----

## Conditions of Issuance of Test Reports

1. All samples and goods are accepted by the Attestation of Global Compliance (Shenzhen) Co., Ltd (the "Company") solely for testing and reporting in accordance with the following terms and conditions. The company provides its services on the basis that such terms and conditions constitute express agreement between the company and any person, firm or company requesting its services (the "Clients").

2. Any report issued by Company as a result of this application for testing services (the "Report") shall be issued in confidence to the Clients and the Report will be strictly treated as such by the Company. It may not be reproduced either in its entirety or in part and it may not be used for advertising or other unauthorized purposes without the written consent of the Company. The Clients to whom the Report is issued may, however, show or send it, or a certified copy thereof prepared by the Company to its customer, supplier or other persons directly concerned. The Company will not, without the consent of the Clients, enter into any discussion or correspondence with any third party concerning the contents of the Report, unless required by the relevant governmental authorities, laws or court orders.

3. The Company shall not be called or be liable to be called to give evidence or testimony on the Report in a court of law without its prior written consent, unless required by the relevant governmental authorities, laws or court orders.

4. In the event of the improper use of the report as determined by the Company, the Company reserves the right to withdraw it, and to adopt any other additional remedies which may be appropriate.

5. Samples submitted for testing are accepted on the understanding that the Report issued cannot form the basis of, or be the instrument for, any legal action against the Company.

6. The Company will not be liable for or accept responsibility for any loss or damage however arising from the use of information contained in any of its Reports or in any communication whatsoever about its said tests or investigations.

7. Clients wishing to use the Report in court proceedings or arbitration shall inform the Company to that effect prior to submitting the sample for testing.

8. The Company is not responsible for recalling the electronic version of the original report when any revision is made to them. The Client assumes the responsibility to providing the revised version to any interested party who uses them.

9. Subject to the variable length of retention time for test data and report stored hereinto as otherwise specifically required by individual accreditation authorities, the Company will only keep the supporting test data and information of the test report for a period of six years. The data and information will be disposed of after the aforementioned retention period has elapsed. Under no circumstances shall we provide any data and information which has been disposed of after retention period. Under no circumstances shall we be liable for damage of any kind, including (but not limited to) compensatory damages, lost profits, lost data, or any form of special, incidental, indirect, consequential or punitive damages of any kind, whether based on breach of contract of warranty, tort (including negligence), product liability or otherwise, even if we are informed in advance of the possibility of such damages.
