

## TEST REPORT On Behalf of

### MID OCEAN BRANDS B.V.

## COB pocket size rechargeable COB flashlight withcarabiner hook

Model No.: MO2280

Prepared for: MID OCEAN BRANDS B.V.

Address: 7/F, Kings Tower, 111 King Lam Street, Cheung Sha Wan, Kow-

loon, Hong Kong

Prepared by: Shenzhen Alpha Product Testing Co., Ltd.

Address: Building i, No.2, Lixin Road, Fuyong Street, Bao'an District,

518103, Shenzhen, Guangdong, China

Date of Test: April 23, 2024

Date of Report: April 25, 2024

**Report Number:** A2404177-C01-R01

**Version Number:** V0

### TEST REPORT IEC 62471 hotobiological safety of lamps and la

## Photobiological safety of lamps and lamp systems

Report Reference No...... A2404177-C01-R01

Tested by (name + signature) .....: Max Peng

Approved by (name + signature).....: Marco Fu

Date of issue...... April 25, 2024

Total number of pages ...... 19pages

Testing Laboratory ...... Shenzhen Alpha Product Testing Co., Ltd.

Address ....... Building i, No.2, Lixin Road, Fuyong Street, Bao'an District,

518103, Shenzhen, Guangdong, China

Testing location/ procedure ....... TL 🖂 RMT 🗌 SMT 🔲 WMT 🔲 TMP 🗍

Applicant's name...... MID OCEAN BRANDS B.V.

Hong Kong

Test specification:

Standard ...... IEC 62471:2006 (First Edition)

Test procedure ...... Type-test report

Non-standard test method...... N/A

Test Report Form No...... IEC62471B

Master TRF...... Dated 2018-08-16

Test item description : COB pocket size rechargeable COB flashlight withcarabiner hook

Model/Type reference ...... MO2280

Model difference ...... N/A

Manufacturer ...... MID OCEAN BRANDS B.V.

Hong Kong

**EU Group Differences** 

 $\boxtimes$  The product fulfils the requirements of EN 62471:2008.

### **General product information:**

- 1. Product: COB pocket size rechargeable COB flashlight withcarabiner hook.
- 2. The product has main light and side light, and at the request of the customer, both two light sources data are tested.
- 3. The unit classifications are the Exempt Group.

| Clause | Requirement + Test |              | Result – Remark     | Verdict   |

| 4     | EXPOSURE LIMITS   | Р                        |
|-------|---|--------------------------|
| 4.1   | General   | Р                        |
|       | The exposure limits in this standard is not less than 0,01 ms and not more than any 8-hour period and should be used as guides in the control of exposure   | Р                        |
|       | Detailed spectral data of a light source are generally required only if the luminance of the source exceeds $10^4  \mathrm{cd}^{-2}$ See clause 4.3   | N/A                      |
| 4.3   | Hazard exposure limits  | Р                        |
| 4.3.1 | Actinic UV hazard exposure limit for the skin and eye   | Р                        |
|       | The exposure limit for effective radiant exposure is 30 J·m <sup>-2</sup> within any 8-hour period  | Р                        |
|       | To protect against injury of the eye or skin from ultraviolet radiation exposure produced by a broadband source, the effective integrated spectral irradiance, E <sub>S</sub> , of the light source shall not exceed the levels defined by:   | P                        |
|       | $E_{s} \cdot t = \sum_{200}^{400} \sum_{t} E_{\lambda}(\lambda, t) \cdot S_{UV}(\lambda) \cdot \Delta t \cdot \Delta \lambda \le 30 \qquad J \cdot m^{-2}$  | Р                        |
|       | The permissible time for exposure to ultraviolet radiation incident upon the unprotected eye or skin shall be computed by:  | Р                        |
|       | $t_{\text{max}} = \frac{30}{E_{\text{S}}} \qquad \text{S}$  | Р                        |
| 4.3.2 | Near-UV hazard exposure limit for eye   | Р                        |
|       | For the spectral region 315 nm to 400 nm (UV-A) the total radiant exposure to the eye shall not exceed 10000 J·m <sup>-2</sup> for exposure times less than 1000 s. For exposure times greater than 1000 s (approximately 16 minutes) the UV-A irradiance for the unprotected eye, E <sub>UVA</sub> , shall not exceed 10 W·m <sup>-2</sup> . | P                        |
|       | The permissible time for exposure to ultraviolet radiation incident upon the unprotected eye for time less than 1000 s, shall be computed by:   | Р                        |
|       | $t_{\text{max}} \le \frac{10\ 000}{E_{\text{UVA}}} \qquad \text{s}$   | Р                        |
| 4.3.3 | Retinal blue light hazard exposure limit  | Р                        |
|       | To protect against retinal photochemical injury from chronic blue-light exposure, the integrated spectral radiance of the light source weighted against the blue-light hazard function, $B(\lambda)$ , i.e., the blue-light weighted radiance , $L_B$ , shall not exceed the levels defined by:   | Р                        |
|       | $L_{\rm B} \cdot t = \sum_{300}^{700} \sum_t L_{\lambda}(\lambda, t) \cdot B(\lambda) \cdot \Delta t \cdot \Delta \lambda \le 10^6 \qquad \text{J} \cdot \text{m}^{-2} \cdot \text{sr}^{-1}  \text{for } t \le 10^4 \text{ s} \qquad t_{\rm max} = \frac{1}{L}$   | 0 <sup>6</sup><br>-B N/A |

Page 4 of 19 Report No.: A2404177-C01-R01

| IEC 62471                                 |         |
|---|---------|
| Clause Requirement + Test Result – Remark | Verdict |

|       | $L_{B} = \sum_{QQQ}^{700} L_{\lambda} \cdot B(\lambda) \cdot \Delta \lambda \le 100 \qquad W \cdot m^{-2} \cdot sr^{-1}$  | for t > 10 <sup>4</sup> s                    | Р   |
|-------|---|--|-----|
| 4.3.4 | Retinal blue light hazard exposure limit - small source   | <u>.                                    </u> | N/A |
|       | Thus the spectral irradiance at the eye $E_{\lambda}$ , weighted against the blue-light hazard function $B(\lambda)$ shall not exceed the levels defined by:  | See table 4.2                                | N/A |
|       | $E_{B} \cdot t = \sum_{300}^{700} \sum_{t} E_{\lambda}(\lambda, t) \cdot B(\lambda) \cdot \Delta t \cdot \Delta \lambda \le 100 \qquad J \cdot m^{-2}$  | for t ≤ 100 s                                | N/A |
|       | $E_{B} = \sum_{300}^{700} E_{\lambda} \cdot B(\lambda) \cdot \Delta \lambda \le 1 \qquad W \cdot m^{-2}$  | for t > 100 s                                | N/A |
| 4.3.5 | Retinal thermal hazard exposure limit   |  | Р   |
|       | To protect against retinal thermal injury, the integrated spectral radiance of the light source, $L_{\lambda}$ , weighted by the burn hazard weighting function $R(_{\lambda})$ (from Figure 4.2 and Table 4.2), i.e., the burn hazard weighted radiance, shall not exceed the levels defined by: |  | P   |
|       | $L_{\rm R} = \sum_{380}^{1400} L_{\lambda} \cdot R(\lambda) \cdot \Delta \lambda \le \frac{50000}{\alpha \cdot t^{0.25}}$ W · m <sup>-2</sup> · sr <sup>-1</sup>  | (10 µs ≤ t ≤ 10 s)                           | N/A |
| 4.3.6 | Retinal thermal hazard exposure limit – weak visual   | stimulus                                     | Р   |
|       | For an infrared heat lamp or any near-infrared source where a weak visual stimulus is inadequate to activate the aversion response, the near infrared (780 nm to 1400 nm) radiance, L <sub>IR</sub> , as viewed by the eye for exposure times greater than 10 s shall be limited to:              |  | P   |
|       | $L_{\rm IR} = \sum_{780}^{1400} L_{\lambda} \cdot R(\lambda) \cdot \Delta \lambda \le \frac{6000}{\alpha} \qquad W \cdot m^{-2} \cdot \text{sr}^{-1}$   |  | N/A |
| 4.3.7 | Infrared radiation hazard exposure limits for the eye   |  | Р   |
|       | The avoid thermal injury of the cornea and possible delayed effects upon the lens of the eye (cataractogenesis), ocular exposure to infrared radiation, E <sub>IR</sub> , over the wavelength range 780 nm to 3000 nm, for times less than 1000 s, shall not exceed:                              |  | Р   |
|       | $E_{\text{IR}} = \sum_{780}^{3000} E_{\lambda} \cdot \Delta \lambda \le 18000 \cdot t^{-0.75}$ W · m <sup>-2</sup>  | t ≤ 1000 s                                   | N/A |
|       | For times greater than 1000 s the limit becomes:  |  | Р   |
|       | $E_{\rm IR} = \sum_{780}^{3000} E_{\lambda} \cdot \Delta \lambda \le 100$ W · m <sup>-2</sup>   | t>1000 s                                     | Р   |
| 4.3.8 | Thermal hazard exposure limit for the skin  | 1  | Р   |
|       | Visible and infrared radiant exposure (380 nm to 3000 nm) of the skin shall be limited to:  |  | Р   |

| 5       | MEASUREMENT OF LAMPS AND LAMP SYSTEM   | S         | Р   |
| 5.1     | Measurement conditions   |           | Р   |
|         | Measurement conditions shall be reported as part of the evaluation against the exposure limits and the assignment of risk classification.  |           | Р   |
| 5.1.1   | Lamp ageing (seasoning)  | Not lamps | N/A |
|         | Seasoning of lamps shall be done as stated in the appropriate IEC lamp standard.   |           | N/A |
| 5.1.2   | Test environment   |           | Р   |
|         | For specific test conditions, see the appropriate IEC lamp standard or in absence of such standards, the appropriate national standards or manufacturer's recommendations.             |           | Р   |
| 5.1.3   | Extraneous radiation   |           | Р   |
|         | Careful checks should be made to ensure that extraneous sources of radiation and reflections do not add significantly to the measurement results.                                      |           | Р   |
| 5.1.4   | Lamp operation   |           | N/A |
|         | Operation of the test lamp shall be provided in accordance with:   |           | N/A |
|         | <ul> <li>the appropriate IEC lamp standard, or</li> </ul>  |           | N/A |
|         | the manufacturer's recommendation  |           | N/A |
| 5.1.5   | Lamp system operation  |           | Р   |
|         | The power source for operation of the test lamp shall be provided in accordance with:  |           | Р   |
|         | <ul> <li>the appropriate IEC standard, or</li> </ul>   |           | N/A |
|         | the manufacturer's recommendation  |           | Р   |
| 5.2     | Measurement procedure  |           | Р   |
| 5.2.1   | Irradiance measurements  |           | Р   |
|         | Minimum aperture diameter 7mm.   |           | Р   |
|         | Maximum aperture diameter 50 mm.   |           | Р   |
|         | The measurement shall be made in that position of the beam giving the maximum reading.   |           | Р   |
|         | The measurement instrument is adequate calibrated.   |           | Р   |
| 5.2.2   | Radiance measurements  |           | Р   |
| 5.2.2.1 | Standard method  |           | N/A |
|         | The measurements made with an optical system.  |           | N/A |
|         | The instrument shall be calibrated to read in absolute radiant power per unit receiving area and per unit solid angle to acceptance averaged over the field of view of the instrument. |           | N/A |

Page 6 of 19 Report No.: A2404177-C01-R01

| Clause  | Requirement + Test  | Result – Remark         | Verdict |
|---------|---|-------------------------|---------|
|         |   | Τ                       | 1       |
| 5.2.2.2 | Alternative method  |                         | N/A     |
|         | Alternatively to an imaging radiance set-up, an irradiance measurement set-up with a circular field stop placed at the source can be used to perform radiance measurements.   |                         | N/A     |
| 5.2.3   | Measurement of source size  |                         | Р       |
|         | The determination of $\alpha$ , the angle subtended by a source, requires the determination of the 50% emission points of the source.   |                         | Р       |
| 5.2.4   | Pulse width measurement for pulsed sources  |                         | N/A     |
|         | The determination of $\Delta t$ , the nominal pulse duration of a source, requires the determination of the time during which the emission is > 50% of its peak value.  |                         | N/A     |
| 5.3     | Analysis methods  |                         | Р       |
| 5.3.1   | Weighting curve interpolations  |                         | Р       |
|         | To standardize interpolated values, use linear interpolation on the log of given values to obtain intermediate points at the wavelength intervals desired.  | See table 4.1           | Р       |
| 5.3.2   | Calculations  |                         | Р       |
|         | The calculation of source hazard values shall be performed by weighting the spectral scan by the appropriate function and calculating the total weighted energy.  |                         | Р       |
| 5.3.3   | Measurement uncertainty   |                         | Р       |
|         | The quality of all measurement results must be quantified by an analysis of the uncertainty.  | See Annex C in the norm | Р       |
| 6       | LAMP CLASSIFICATION   |                         | Р       |
|         | For the purposes of this standard it was decided that the values shall be reported as follows:  | See table 6.1           | Р       |
|         | <ul> <li>for lamps intended for general lighting service,<br/>the hazard values shall be reported as either ir-<br/>radiance or radiance values at a distance which<br/>produces an illuminance of 500 lux, but not at a<br/>distance less than 200 mm</li> </ul> |                         | P       |
|         | <ul> <li>for all other light sources, including pulsed lamp<br/>sources, the hazard values shall be reported at a<br/>distance of 200 mm</li> </ul>   |                         | N/A     |
| 6.1     | Continuous wave lamps   | 1                       | Р       |
| 6.1.1   | Exempt Group  |                         | Р       |
|         | In the exempt group are lamps, which don't pose any photobiological hazard. The requirement is met by any lamp that does not pose:  |                         | Р       |
|         | <ul> <li>an actinic ultraviolet hazard (E<sub>S</sub>) within 8-hours<br/>exposure (30000 s), nor</li> </ul>  |                         | Р       |
|         | <ul> <li>a near-UV hazard (E<sub>UVA</sub>) within 1000 s, (about 16 min), nor</li> </ul>   |                         | Р       |

|     | CENELEC COMMON MODIFICATIONS (EN)   |     |
|-----|---|-----|
| 4   | EXPOSURE LIMITS   | Р   |
|     | Contents of the whole Clause 4 of IEC 62471:2006 moved into a new informative Annex ZB  | _   |
|     | Clause 4 replaced by the following:   | Р   |
|     | The original Clause 4 of IEC 62471:2006 contains provisions governing limiting values for the exposure of persons falling within the area of the health and safety of workers. Within Europe those limiting values are already covered by the Artificial Optical Radiation Directive (2006/25/EC). Thus, the limits of the directive have to be applied instead of those fixed in IEC 62471:2006. | P   |
|     | There are no differences in EN 62471:2008 regarding the classification of lamps according Clause 6 of IEC 62471:2006.   | _   |
