TEST REPORT

Sample description: Battery

Test method: IEC 62321:2008-Electrotechnical Products - Determination of Levels of Regulated Substances (Lead, Mercury, Cadmium,)

| Test Item | Result (mg/kg) | Limit (%) | |
|--------------|----------------|--------------|--|
| restitem | 7565121 | | |
| Lead (Pb) | N.D. | | |
| Cadmium (Cd) | N.D. | 0.002 | |
| Mercury (Hg) | N.D. | 0.0005 | |

(1) 1 mg/kg = 1 ppm = 0.0001%

- (2) N.D. = Not Detected (less than MDL)
- (3) MDL = Method Detection Limit
- (4) "--" = Not Regulated
- (5) Remark: According to the Article 21(3) of Directive 2006/66/EC, Battery, accumulator and button cell shall include the chemical symbol Mercury when containing morn than 0.0005% of Hg, the chemical symbol Cadmium when containing more than 0.002% of Cd and the chemical symbol Pb when containing more than 0.004% of Pb

|--------|----------------------------------|--------------------|---------|--|--|
| | IEC 62133-2: 2017 | | | | |
| Clause | Requirement + Test | Result - Remark | Verdict | | |
| 4 | PARAMETER MEASUREMENT TOLERANCES | | Р | | |
| | Parameter measurement tolerances | | Р | | |

| 5 | GENERAL SAFETY CONSIDERATIONS | | Р |
|-----|--|--|-----|
| 5.1 | General | | Р |
| | Cells and batteries so designed and constructed that they are safe under conditions of both intended use and reasonably foreseeable misuse | | Р |
| 5.2 | Insulation and wiring | Cell only | N/A |
| | The insulation resistance between the positive terminal and externally exposed metal surfaces of the battery (excluding electrical contact surfaces) is not less than 5 M Ω | | N/A |
| | Insulation resistance (MΩ) | | — |
| | Internal wiring and insulation are sufficient to withstand maximum anticipated current, voltage and temperature requirements | | N/A |
| | Orientation of wiring maintains adequate clearance and creepage distances between conductors | | N/A |
| | Mechanical integrity of internal connections accommodates reasonably foreseeable misuse | | N/A |
| 5.3 | Venting | | Р |
| | Battery cases and cells incorporate a pressure relief mechanism or are constructed so that they relieve excessive internal pressure at a value and rate that will preclude rupture, explosion and self-ignition | Venting mechanism exists on the narrow side of pouch cell. | Ρ |
| | Encapsulation used to support cells within an outer casing does not cause the battery to overheat during normal operation nor inhibit pressure relief | | N/A |
| 5.4 | Temperature, voltage and current management | Cell only. | N/A |
| | Batteries are designed such that abnormal temperature rise conditions are prevented | | N/A |
| | Batteries are designed to be within temperature, voltage and current limits specified by the cell manufacturer | | N/A |
| | Batteries are provided with specifications and charging instructions for equipment manufacturers so that specified chargers are designed to maintain charging within the temperature, voltage and current limits specified | | N/A |
| 5.5 | Terminal contacts | | Р |
| | The size and shape of the terminal contacts ensure that they can carry the maximum anticipated current | Complied. | Р |

| | IEC 62133-2: 2017 | | |
|--------|--|-----------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | External terminal contact surfaces are formed from conductive materials with good mechanical strength and corrosion resistance | Complied. | Р |
| | Terminal contacts are arranged to minimize the risk of short-circuit | | N/A |
| 5.6 | Assembly of cells into batteries | Cell only | N/A |
| 5.6.1 | General | | N/A |
| | Each battery have an independent control and protection for current, voltage, temperature and any other parameter required for safety and to maintain the cells within their operating region | | N/A |
| | This protection may be provided external to the battery such as within the charger or the end devices | | N/A |
| | If protection is external to the battery, the manufacturer of the battery provide this safety relevant information to the external device manufacturer for implementation | | N/A |
| | If there is more than one battery housed in a single battery case, each battery have protective circuitry that can maintain the cells within their operating regions | | N/A |
| | Manufacturers of cells specify current, voltage and temperature limits so that the battery manufacturer/designer may ensure proper design and assembly | | N/A |
| | Batteries that are designed for the selective discharge of a portion of their series connected cells incorporate circuitry to prevent operation of cells outside the limits specified by the cell manufacturer | | N/A |
| | Protective circuit components added as appropriate and consideration given to the end-device application | | N/A |
| | The manufacturer of the battery provide a safety analysis of the battery safety circuitry with a test report including a fault analysis of the protection circuit under both charging and discharging conditions confirming the compliance | | N/A |
| 5.6.2 | Design recommendation | Cell only | N/A |
| | For the battery consisting of a single cell or a single cellblock, it is recommended that the charging voltage of the cell does not exceed the upper limit of the charging voltage specified in Table 2 | | N/A |

Page 8 of 23

| | IEC 62133-2: 2017 | | | | |
|--------|--|-----------------|---------|--|--|
| Clause | Requirement + Test | Result - Remark | Verdict | | |
| | For the battery consisting of series-connected plural single cells or series-connected plural cellblocks, it is recommended that the voltages of any one of the single cells or single cellblocks does not exceed the upper limit of the charging voltage, specified in Table 2, by monitoring the voltage of every single cell or the single cellblocks | | N/A | | |
| | For the battery consisting of series-connected plural single cells or series-connected plural cellblocks, it is recommended that charging is stopped when the upper limit of the charging voltage is exceeded for any one of the single cells or single cellblocks by measuring the voltage of every single cell or the single cellblocks | | N/A | | |
| | For batteries consisting of series-connected cells or cell blocks, nominal charge voltage not be counted as an overcharge protection | | N/A | | |
| | For batteries consisting of series-connected cells or cell blocks, cells have closely matched capacities, be of the same design, be of the same chemistry and be from the same manufacturer | | N/A | | |
| | It is recommended that the cells and cell blocks not discharged beyond the cell manufacturer's specified final voltage | | N/A | | |
| | For batteries consisting of series-connected cells or cell blocks, cell balancing circuitry incorporated into the battery management system | | N/A | | |
| 5.6.3 | Mechanical protection for cells and components of batteries | Cell only | N/A | | |
| | Mechanical protection for cells, cell connections and control circuits within the battery provided to prevent damage as a result of intended use and reasonably foreseeable misuse | | N/A | | |
| | The mechanical protection can be provided by the battery case or it can be provided by the end product enclosure for those batteries intended for building into an end product | | N/A | | |
| | The battery case and compartments housing cells designed to accommodate cell dimensional tolerances during charging and discharging as recommended by the cell manufacturer | | N/A | | |
| | For batteries intended for building into a portable end product, testing with the battery installed within the end product considered when conducting mechanical tests | | N/A | | |
| 5.7 | Quality plan | | Р | | |

| | IEC 62133-2: 2017 | | | | |
|--------|---|--|---------|--|--|
| Clause | Requirement + Test | Result - Remark | Verdict | | |
| | The manufacturer prepares and implements a quality plan that defines procedures for the inspection of materials, components, cells and batteries and which covers the whole process of producing each type of cell or battery | Complied. ISO 9001: 2015 certificate provided. | P | | |
| 5.8 | Battery safety components | | N/A | | |
| | According annex F | See TABLE: Critical components information. | N/A | | |

| 6 | TYPE TEST AND SAMPLE SIZE | | Р |
|---|---|----------------|-----|
| | Tests are made with the number of cells or batteries specified in Table 1 using cells or batteries that are not more than six months old | | Р |
| | Coin cells with resistance $\leq 3 \Omega$ (measured according annex D) are tested according table 1 | Not coin cells | N/A |
| | Unless otherwise specified, tests are carried out in an ambient temperature of 20 °C \pm 5 °C | | Р |
| | The safety analysis of 5.6.1 identify those components of the protection circuit that are critical for short-circuit, overcharge and overdischarge protection | Cell only | N/A |
| | When conducting the short-circuit test, consideration given to the simulation of any single fault condition that is likely to occur in the protecting circuit that would affect the short-circuit test | Cell only | N/A |

| 7 | Specific requirements and tests | | Р |
|-------|--|------------|---|
| 7.1 | Charging procedure for test purposes | | Р |
| 7.1.1 | First procedure | | Р |
| | This charging procedure applies to subclauses other than those specified in 7.1.2 | | Р |
| | Unless otherwise stated in this document, the charging procedure for test purposes is carried out in an ambient temperature of 20 °C \pm 5 °C, using the method declared by the manufacturer | See page 5 | Р |
| | Prior to charging, the battery have been discharged at 20 °C \pm 5 °C at a constant current of 0,2 It A down to a specified final voltage | See page 5 | Р |
| 7.1.2 | Second procedure | | Р |
| | This charging procedure applies only to 7.3.1, 7.3.4, 7.3.5, and 7.3.9 | | Р |

| | IEC 62133-2: 2017 | | | |
|--------|--|--|---------|--|
| Clause | Requirement + Test | Result - Remark | Verdict | |
| | After stabilization for 1 h and 4 h, respectively, at ambient temperature of highest test temperature and lowest test temperature, as specified in Table 2, cells are charged by using the upper limit charging voltage and maximum charging current, until the charging current is reduced to 0,05 lt A, using a constant voltage charging method | Charge temperature 10-45°C declared. 10°C used for lower limit tests; 45°C used for upper limit tests | Ρ | |
| 7.2 | Intended use | | Р | |
| 7.2.1 | Continuous charging at constant voltage (cells) | Tested complied. | Р | |
| | Fully charged cells are subjected for 7 days to a charge using the charging method for current and standard voltage specified by the cell manufacturer | Charging for 7 days with 1600mA. | Р | |
| | Results: No fire. No explosion. No leakage: | (See appended table 7.2.1) | Р | |
| 7.2.2 | Case stress at high ambient temperature (battery) | Cell only. | N/A | |
| | Oven temperature (°C): | | — | |
| | Results: No physical distortion of the battery case resulting in exposure of internal protective components and cells | | N/A | |
| 7.3 | Reasonably foreseeable misuse | | Р | |
| 7.3.1 | External short-circuit (cell) | Tested complied. | Р | |
| | The cells were tested until one of the following occurred: | | Р | |
| | - 24 hours elapsed; or | | N/A | |
| | - The case temperature declined by 20 % of the maximum temperature rise | | Р | |
| | Results: No fire. No explosion: | (See appended table 7.3.1) | Р | |
| 7.3.2 | External short-circuit (battery) | Cell only. | N/A | |
| | The batteries were tested until one of the following occurred: | | N/A | |
| | - 24 hours elapsed; or | | N/A | |
| | - The case temperature declined by 20 % of the maximum temperature rise | | N/A | |
| | In case of rapid decline in short circuit current, the battery pack remained on test for an additional one hour after the current reached a low end steady state condition | | N/A | |
| | A single fault in the discharge protection circuit conducted on one to four (depending upon the protection circuit) of the five samples before conducting the short-circuit test | | N/A | |
| | A single fault applies to protective component parts such as MOSFET, fuse, thermostat or positive temperature coefficient (PTC) thermistor | | N/A | |
| | Results: No fire. No explosion: | (See appended table 7.3.2) | N/A | |

| | Page 12 of 23 | Report No. LAB-R | 230314002 |
|---------|--|----------------------------|-----------|
| | IEC 62133-2: 2017 | | |
| Clause | Requirement + Test | Result - Remark | Verdict |
| 7.3.3 | Free fall | Tested complied. | Р |
| | Results: No fire. No explosion | No fire. No explosion. | Р |
| 7.3.4 | Thermal abuse (cells) | Tested complied. | Р |
| | Oven temperature (°C): | 130°C | |
| | Results: No fire. No explosion | No fire. No explosion | Р |
| 7.3.5 | Crush (cells) | Tested complied. | Р |
| | The crushing force was released upon: | | Р |
| | - The maximum force of 13 kN \pm 0,78 kN has been applied; or | | Р |
| | - An abrupt voltage drop of one-third of the original voltage has been obtained | | N/A |
| | Results: No fire. No explosion: | (See appended table 7.3.5) | Р |
| 7.3.6 | Over-charging of battery | Cell only. | N/A |
| | The supply voltage which is: | | N/A |
| | - 1,4 times the upper limit charging voltage presented in Table A.1 (but not to exceed 6,0 V) for single cell/cell block batteries or | | N/A |
| | - 1,2 times the upper limit charging voltage resented in Table A.1 per cell for series connected multi-cell batteries, and | | N/A |
| | - Sufficient to maintain a current of 2,0 It A throughout the duration of the test or until the supply voltage is reached | | N/A |
| | Test was continued until the temperature of the outer casing: | | N/A |
| | - Reached steady state conditions (less than 10 °C change in 30-minute period); or | | N/A |
| | - Returned to ambient | | N/A |
| | Results: No fire. No explosion: | (See appended table 7.3.6) | N/A |
| 7.3.7 | Forced discharge (cells) | Tested complied. | Р |
| | If the discharge voltage reaches the negative value of upper limit charging voltage within the testing duration, the voltage is maintained at the negative value of the upper limit charging voltage by reducing the current for the remainder of the testing duration | | N/A |
| | If the discharge voltage does not reach the negative value of upper limit charging voltage within the testing duration, the test is terminated at the end of the testing duration | | P |
| | Results: No fire. No explosion: | (See appended table 7.3.7) | Р |
| 7.3.8 | Mechanical tests (batteries) | Cell only. | N/A |
| 7.3.8.1 | Vibration | | N/A |

| | IEC 62133-2: 2017 | | |
|---------|---|---|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | Results: No fire, no explosion, no rupture, no leakage or venting | (See appended table 7.3.8.1) | N/A |
| 7.3.8.2 | Mechanical shock | | N/A |
| | Results: No leakage, no venting, no rupture, no explosion and no fire: | (See appended table 7.3.8.2) | N/A |
| 7.3.9 | Design evaluation – Forced internal short-circuit (cells) | | N/A |
| | The cells complied with national requirement for: | Not requested by client, not comply with the requirements of France, Japan, Republic of Korea and Switzerland. | _ |
| | The pressing was stopped upon: | | N/A |
| | - A voltage drop of 50 mV has been detected; or | | N/A |
| | - The pressing force of 800 N (cylindrical cells) or 400 N (prismatic cells) has been reached | | N/A |
| | Results: No fire | (See appended table 7.3.9) | N/A |

| 8 | INFORMATION FOR SAFETY | | |
|-----|---|--|-----|
| 8.1 | General | | Р |
| | Manufacturers of secondary cells ensure that information is provided about current, voltage and temperature limits of their products | Information for safety mentioned in manufacturer's specifications. | Р |
| | Manufacturers of batteries ensure that equipment manufacturers and, in the case of direct sales, end- users are provided with information to minimize and mitigate hazards | Cell only | N/A |
| | Systems analyses performed by device manufacturers to ensure that a particular battery design prevents hazards from occurring during use of a product | | N/A |
| | As appropriate, any information relating to hazard avoidance resulting from a system analysis provided to the end user | | N/A |
| | Do not allow children to replace batteries without adult supervision | | N/A |
| 8.2 | Small cell and battery safety information | Not small cell and battery | N/A |
| | The following warning language is to be provided with the information packaged with the small cells and batteries or equipment using them: | | N/A |
| | - Keep small cells and batteries which are considered swallowable out of the reach of children | | N/A |
| | - Swallowing may lead to burns, perforation of soft tissue, and death. Severe burns can occur within 2 h of ingestion | | N/A |

| | IEC 62133-2: 2017 | | | | |
|--------|---|-----------------|---------|--|--|
| Clause | Requirement + Test | Result - Remark | Verdict | | |
| | - In case of ingestion of a cell or battery, seek medical assistance promptly | | N/A | | |

| 9 | MARKING | | Р |
|-----|---|--|-----|
| 9.1 | Cell marking | Not requested by client | N/A |
| | Cells marked as specified in IEC 61960, except coin cells | | N/A |
| | Coin cells whose external surface area is too small to accommodate the markings on the cells show the designation and polarity | | N/A |
| | By agreement between the cell manufacturer and the battery and/or end product manufacturer, component cells used in the manufacture of a battery need not be marked | | N/A |
| 9.2 | Battery marking | Cell only | N/A |
| | Batteries marked as specified in IEC 61960, except for coin batteries | | N/A |
| | Coin batteries whose external surface area is too small to accommodate the markings on the batteries show the designation and polarity. Batteries also marked with an appropriate caution statement | | N/A |
| | Terminals have clear polarity marking on the external surface of the battery | | N/A |
| | Batteries with keyed external connectors designed for connection to specific end products need not be marked with polarity markings if the design of the external connector prevents reverse polarity connections | | N/A |
| 9.3 | Caution for ingestion of small cells and batteries | Not small cell and battery | N/A |
| | Coin cells and batteries identified as small batteries according to 8.2 include a caution statement regarding the hazards of ingestion in accordance with 8.2 | | N/A |
| | When small cells and batteries are intended for direct sale in consumer-replaceable applications, caution for ingestion given on the immediate package | | N/A |
| 9.4 | Other information | | Р |
| | Storage and disposal instructions | Information for storage and disposal instructions mentioned in manufacturer's specifications. | Ρ |
| | Recommended charging instructions | Information for recommended charging instructions mentioned in manufacturer's specifications. | Ρ |
