#### General remarks:

"(See Enclosure #)" refers to additional information appended to the report.

"(See remark #)" refers to a remark appended to the report.

"(See appended table)" refers to a table appended to the report.

Throughout this report a comma (point) is used as the decimal separator.

Use of uncertainty of measurement for decisions on conformity (decision rule): No decision rule is specified by the standard, when comparing the measurement result with the applicable limit according to the specification in that standard. The decisions on conformity are made without applying the measurement uncertainty ("simple acceptance" decision rule, previously known as "accuracy method").

Remark:

- Measurement was conducted at voltage 5VDC with USB and at a stable ambient temperature 1. 25°C±5°C.
- 2. Detail information for models covered in this report as below:
